Summary

- Developer of traffic-modeling tools for analyzing urban and regional road pricing and other transportation reforms to improve urban mobility and generate funds for transport investment.
- Authority and quantifier on energy, transport and environment; road pricing, public transit and urban transportation; electricity generation economics; climate policy; energy usage and supply; bicycling; traffic crashes; cost-benefit analysis; policies to internalize societal costs of energy and transport.
- Advocate for “livable streets” including bicycling facilities, pedestrians’ rights and strategic pricing of automobile use.
- Author (four books), blogger, essayist, journalist, dynamic and persuasive public speaker.

Komanoff is director of the consulting firm Komanoff Energy Associates, co-founder and director of the Carbon Tax Center, a founding trustee of the Tri-State Transportation Campaign, “re-founder” of the renowned bicycle-advocacy organization Transportation Alternatives, an organizer with the pedestrian rights organization Right Of Way, and transit advisor and traffic modeler for both the Move NY campaign and the Nurture Nature Foundation. His work combines expertise in policy analysis, a flair for expressing data in concrete terms, and a passion for progressive social change.

Komanoff graduated with honors from Harvard College in 1968 with a B.A. in Applied Math.

Developer of traffic-modeling tools to support road pricing and livable streets

Komanoff is creator and curator of the “Balanced Transportation Analyzer (BTA),” a comprehensive and intricate spreadsheet model that estimates the impacts of road tolls and transit fares on a city or region’s travel speeds, congestion delays, agency revenues and air emissions. In its profile of Komanoff, Wired magazine pronounced the BTA a “masterpiece” for capturing the interactivities among different travel modes, for reflecting the feedbacks between drivers’ tolls costs and time savings, and for allowing estimation of the “social delay costs” caused by the proverbial incremental car trip into the urban core. The BTA is a powerful yet instantly usable tool that gives NGO’s the capacity to test congestion pricing and other transport management proposals that heretofore only government agencies could assess.
The BTA, developed under the tutelage of the late New York civic titan Theodore W. Kheel, and with generous support from Kheel’s Nurture Nature Foundation, is the analytical engine for fresh approaches to congestion pricing in New York City designed to circumvent the perceived geographic and class inequities that contributed to the defeat of the pricing plan advanced earlier by Mayor Michael Bloomberg. This endeavor, conceived by renowned traffic guru “Gridlock” Sam Schwartz, is supported by a coalition of stakeholders as an innovative response to the twin crises of chronic traffic congestion and underfunding of public transit in the New York region.

Komanoff, whom the Wired profile called “the man who could unsnarl Manhattan traffic,” has presented the BTA model to city officials in New York and San Diego; at high-level transport meetings in Washington and Paris; to city and university officials in Guangzhou, China, and to national and regional transportation and environment ministers in Beijing and Hangzhou, China.

Authority on energy, transport and environment

Throughout his more than 4-decade career as a policy analyst, Komanoff has addressed the two largest sources of environmental and social harm in industrial societies: misallocation of resources in electricity generation, and failure to balance motor vehicle transport with other travel modes including public transit.

Transport

Since 2008, Komanoff has been a key component of citizens-based campaigns to implement rational road tolling as a means to reduce traffic gridlock and create a robust new revenue source for public transportation. (See discussion above of the BTA spreadsheet.) He was principal author of the Nurture Nature Foundation’s pathbreaking 2008 report, Balancing Free Transit and Congestion Pricing (cover depicted above).

Komanoff was a founding trustee of the Tri-State Transportation Campaign, whose expert advocates work to reform transport planning and financing in the New York region. He edited and co-authored Tri-State’s founding document, the Citizen Action Plan, a holistic approach to regional transport emphasizing road pricing, center-oriented development and strategic transit upgrades.

Komanoff conceived, managed and edited the Bicycle Blueprint, the most ambitious bicycle-transport plan ever published for any U.S. city (cover depicted at left). He contributed a volume, Environmental Benefits of Bicycling and Walking in the United States, to FHWA’s National Bicycling and Walking Study. He has spelled
out road-pricing proposals in a report for the Energy Foundation and numerous periodicals ranging from the *Pace Environmental Law Review* to many newspapers and magazines. He composed the chapter on bicycling for the *Encyclopedia of Energy*.

**Energy and Electricity**

Throughout the 1970s and ’80s — a period of ferment and debate over the economics of nuclear power — Komanoff was the leading U.S. source of credible information on reactor costs. Through painstaking data collection, rigorous analysis, a stream of articles and books (one of whose covers is depicted below), and articulation to journalists, he helped policy-makers and the public grasp the dimensions of nuclear power’s spiraling costs. During this period, Komanoff consulted for two Congressional agencies, the U.S. Department of Energy, and close to two dozen states including New York, California, Texas and Florida; presented expert testimony before the U.S. Nuclear Regulatory Commission and 20 Public Utility Commissions; testified before four Committees of Congress and the Select Committee on Energy of the House of Commons (U.K.); and tutored a generation of journalists on the extent and causes of cost escalation in the U.S. nuclear power industry.

Komanoff represented Manhattan community groups in evaluating and mitigating a proposal by Con Edison to expand its East 14th Street steam-and-electric station; analyzed the potential for electricity conservation in the New York area for a coalition seeking energy alternatives to the Indian Point reactors in Westchester County; and published *Ending The Oil Age*, a detailed post-9/11 policy prescription for immediately reducing U.S. oil consumption by up to 10%. He was co-developer of “Greening A Block,” an ambitious effort to implement energy-efficient heating, hot water and electric systems on a community scale in buildings on Manhattan’s Lower East Side.

In 2007, Komanoff founded the *Carbon Tax Center*, a clearinghouse and resource center to educate and inform policy makers, opinion leaders and the public about the benefits of and critical need for robustly rising taxes on the carbon contents of fossil fuels. CTC has established a strong presence in Washington DC, within the environmental community and in the national civic arena.

**Environment**

Komanoff’s work on environmental policy dates to 1971-72, when he co-directed a landmark study of pollution in the U.S. electric power industry, *The Price of Power* (cover is depicted on next page). In 1972-74, as an environmental economist for the NYC Dept. of Environmental Protection, he composed original analyses that revealed the poor economic prospects for both the Storm King pumped-storage project in the Hudson Highlands and a vast LNG tank farm on Staten Island, contributing to the demise of both ventures. He has also published popular and technical articles on air pollution and on the balancing required to advance wind power projects.
Komanoff is also an authority on noise pollution. His monograph, *Drowning In Noise: Noise Costs of Jet Skis in America*, published by the Noise Pollution Clearinghouse, used a multi-disciplinary approach to impute dollar costs to noise from jet skis and rank mitigation options. He has advised Manhattan community groups in their efforts to reduce noise emissions from a large telecommunications facility in lower Manhattan and a heliport on Manhattan’s West Side.

**NYC activist and advocate for “livable streets”**

Komanoff brings to advocacy a flair for translating data into human terms, familiarity with New York City’s rich history, solidarity with the city’s many cultures, and a passion for social justice.

Komanoff “re-founded” the NYC-based advocacy organization, Transportation Alternatives, in 1986 and led it as unpaid (but virtually full-time) president for six successful and ground-breaking years. He forged T.A. into a vibrant force for non-motor transportation in the New York region and made it a model for grassroots transportation advocacy in dozens of U.S. cities. Under his leadership T.A. defeated a proposed Midtown bike ban and expanded cycling access to area bridges, roads and transit systems. *Bicycling* magazine acknowledged Komanoff’s accomplishments by naming him a 1990 “Bicyclist of the Year.”

After stepping down as T.A. president in 1992, Komanoff co-founded the pedestrian rights organization *Right Of Way*. He spearheaded the group’s “street memorial” project that created hundreds of individualized on-site memorials to New York City pedestrians and cyclists and was recognized in 2001 by *Industrial Design* Magazine for advancing socially conscious design. Komanoff’s 1999 report for Right Of Way, *Killed By Automobile* (cover depicted at left) drew on statistical analysis by the group’s volunteers of nearly 1,000 NYC pedestrian and cyclist fatalities. These endeavors provoked a paradigm shift from victim-blaming to driver culpability that contributed to reducing New York City pedestrian fatalities and helped lay the groundwork for the city’s “Vision Zero” initiative against traffic dangers. Right Of Way re-organized in 2013 with new energy from a younger generation of activists whose artistry and use of social media have made the work even more radical and humane.

**Writer: Selected Bibliography**

List includes printed pieces only and thus omits dozens of Web-published posts on *Grist*; more than 120 posts on *Streetsblog*; and several hundred on the Carbon Tax Center’s blog; some links are available at [www.komanoff.net](http://www.komanoff.net).
Books (some with covers depicted above)

*The Bicycle Blueprint: A Plan to Bring Bicycling into the Mainstream in New York City* (Transportation Alternatives, 1993), chief editor, and co-author with Michele Herman et al.

Book Chapters

Major Reports

*Securing Power Through Energy Conservation and Efficiency in New York: Profiting from California’s Experience* (Riverkeeper et al., 2002).

*Ending The Oil Age: A Plan to Kick the Saudi Habit* (Komanoff Energy Associates, New York, 2002).

*Drowning In Noise: Noise Costs of Jet Skis in America* (Noise Pollution Clearinghouse, Montpelier, VT, 2000), with Dr. Howard Shaw.

*Subsidies for Traffic: How Taxpayer Dollars Underwrite Driving in NY State* (Tri-State Transportation Campaign, New York, with Cora Roelofs, 1994).

*Environmental Benefits of Bicycling and Walking in the United States* (Federal Highway Administration, 1992,
